Community Engagement Workshop

Reimagining Mackerel Cove Beach & Sheffield Cove Waterfront

**LAR445 Integrated Capstone Class
OCE 496/CVE 498 Senior Capstone class**

February 20, 2025

College of the Environment & Life Sciences
College of Engineering

Community Engagement Workshop Agenda:

- **Pizza & social time: 6:00-6:30pm**
- **Presentation at 6:30pm**
- **Group activities starting around 7:00pm**
- **Workshop end time: 8:00pm**

An aerial photograph of Mackerel Cove, showing a curved road along the water's edge. The water is a deep blue, and the surrounding land is covered in trees and some buildings. The title text is overlaid on the upper half of the image.

Mackerel Cove Dune Reconstruction

Logan Bukowski and Eva Davet
OCE 496/CVE 498 Senior Capstone Design Project

About STORMTOOLS

- Maps Storm Inundation for Coastal Rhode Island
 - With multiple Sea Level Rise (SLR) scenarios

Tools:

- STORMTOOLS for Beginners
- Advanced STORMTOOLS
- STORMTOOLS Design Elevation
- Coastal Environmental Risk Index

Developed in 2016 in RI, with research done by URI professors

STORMTOOLS For Beginners

STORMTOOLS for Beginners

RI CRMC Coastal Hazard Application

STORMTOOLS Design Elevation (SDE)

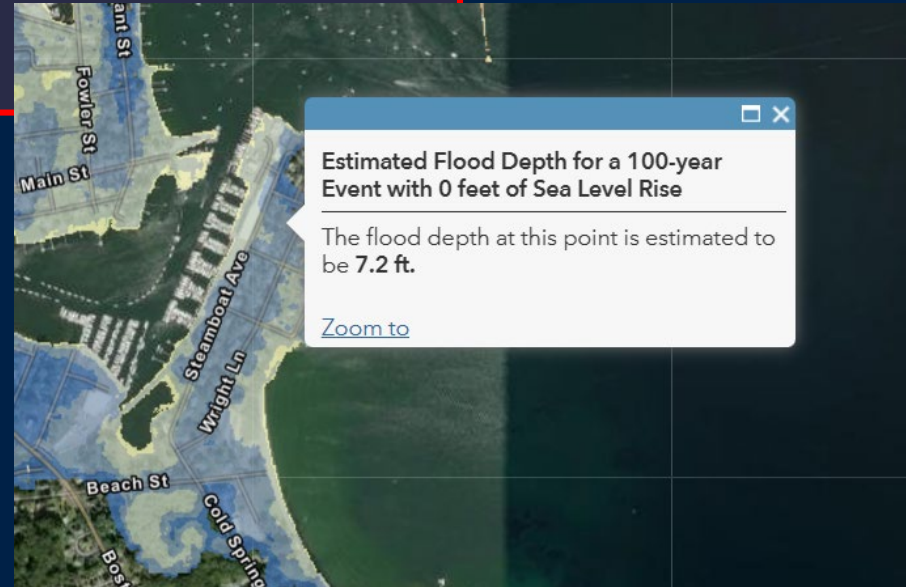

Inland STORMTOOLS

More ▾

1. Is my property vulnerable to STORM SURGE?
2. How DEEP will the water be on my property during a 100-year (1% chance) coastal storm?
3. Will projected SEA LEVEL RISE affect my property?

Legend

Is my property vulnerable to a 100-year return period (1% annual chance) COASTAL STORM, and how DEEP will the water be?

STORMTOOLS Design Elevation (SDE)

Inland STORMTOOLS

More ▾

- STORMTOOLS Advanced can be used for Topography and Bathymetry.

- NACCS Save Points are available here with wave heights and water levels.

Point ID:10114 -- Significant Wave Height at the 95% C.I.

10 year return: 9.68 ft.
20 Year Return: 9.97 ft.
50 year return: 10.30 ft.
100 year return: 10.53 ft.
[View the full table](#)

Wave Height vs Return Period for Point #10114

[Click for larger image](#)

[Zoom to](#)

- Storm return period with varying levels of SLR can also be visualized.

STORMTOOLS Design Elevation (SDE)

STORMTOOLS for Beginners

Advanced STORMTOOLS

RI CRMC Coastal Hazard Application

STORMTOOLS Design Elevation (SDE)

Inland STORMTOOLS

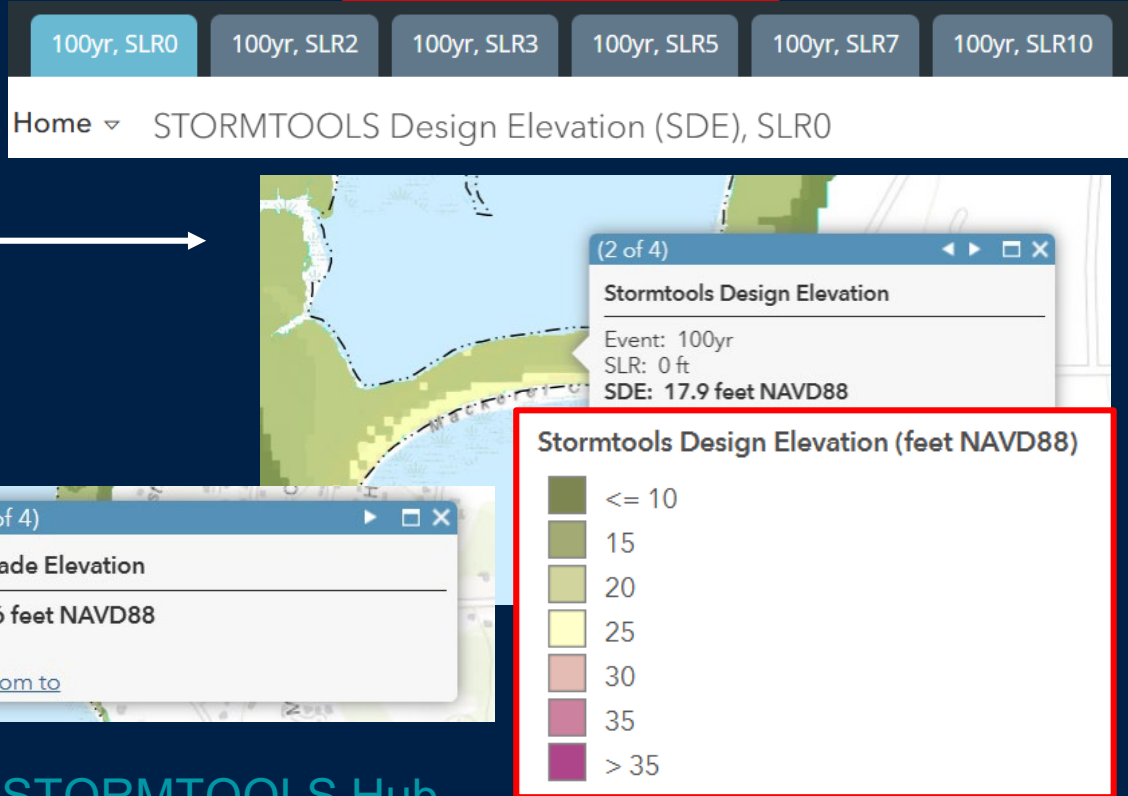

More ▾

- STORMTOOLS SDE Maps can be used to find the SDE (BFE) for 100 year storms with SLR.

- Can also determine the wave crest and surge levels as well as current grade elevation.

- Grade elevation can also be accessed from the SDE tab.

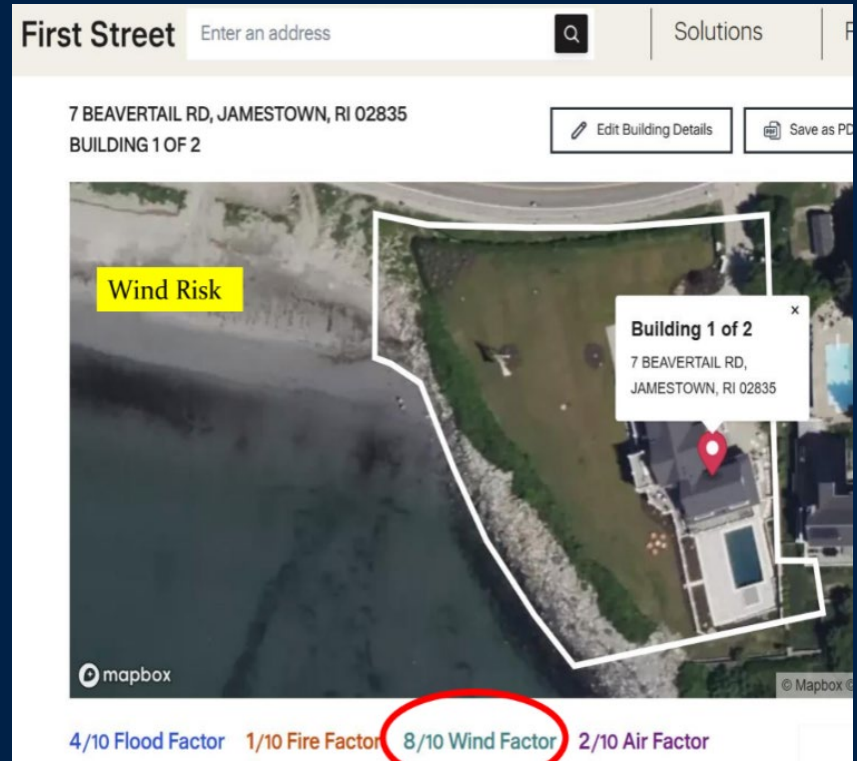

Base Flood Elevation (BFE)

About First Street Foundation

- Aims to connect climate change and financial risk at scale for financial institutions, companies, and governments
 - With multiple SLR scenarios
- Provides comprehensive set of climate hazards including:
 - Flooding
 - Winds
 - Wildfire
 - Extreme heat
 - Air quality
- Conducts scenario analysis to determine the financial risks from extreme climates
- The macroeconomic module quantifies how climate risks will impact insurance prices, population migration, HPI (House Price Index), and property values.

Federal Emergency Management Agency Cost Benefit Analysis

- Cost benefit analysis (CBA) can be an important tool to determine if elevating one's house is a worthwhile investment
- FEMA has developed a CBA toolkit
- The toolkit requires the following information, all of which can be found using STORMTOOLS or accessed using public tax assessment data:

[FEMA CBA Toolkit](#)

Introduction to Completed Work

Evaluate the feasibility of using reinforced dunes to mitigate flooding and erosion at Mackerel Cove Beach in Jamestown, Rhode Island.

Importance of Beavertail Road

- Beavertail Road is the only roadway connecting the West and East sides of Jamestown
 - Critical evacuation infrastructure
- West of Mackerel Cove there are:
 - 186 structures (93 % residential)
 - This accounts for roughly 6.4 % Jamestown's residential buildings
 - Total parcel estimations: \$455 million
 - Total land estimation: \$332 million
 - Total building estimation: \$123 million

Problem Statement

- December 23, 2022
- High tide 5.1 ft above NAVD88
- 10 yr storm

Quincy, MJ, and 12/23/2022 | 7:55 am. "Beavertail Rd." MyCoast, mycoast.org/reports/99712. Accessed 7 Nov. 2024.

Design Flood Conditions

- Design a dune to an elevation of 12 ft in order to prevent flood damage against:
 - 50yr storm surge with tidal influence
 - 20yr base flood elevation

- Road elevation ~ 6.5 feet above NAVD88
- Current dune elevation ~ 7 feet above NAVD88

Preliminary Aerial Image of Reinforced Dune

Required Volume:
6,505 CY

Total Linear Ft:
1,214 ft

- Narrowest portion of beachfront ~ 65 ft
- Current design would require restructuring of the parking lot

Engineered Core Options

Geotextiles

- 10-50 year life span
- Will not degrade unless exposed to UV rays
- Synthetic material
 - Will require special exemption form from Coastal Resource Management Council
- No regular maintenance required
- More resilient in extreme environments

Coir

- 2-5 year life span
- Biodegradable, will naturally degrade over time
- Eco-friendly
 - Allowed by Coastal Resource Management Council
- Will require maintenance or replacement
- Less resilient in extreme environments

Cost Estimation

| Item Number | Item | Unit Price | Quantity | Total Cost | Expected Annual Maintenance Cost |
|-----------------|-----------------------------------|------------|----------|-------------|----------------------------------|
| Option A | | | | | |
| 1 | Sand Purchasing | \$36/CY | 6,505 CY | \$233,601 | \$5,220 |
| 2 | Engineering Cost | \$14/CY | 6,505 CY | \$100,114 | \$2,030 |
| 3 | Vegetation Plantings & Purchasing | \$1.03/ft | 1,214 ft | \$1,350 | None |
| 4 | Sand Fencing Cost | \$9/ft | 2,428 ft | \$21,852 | None |
| 5 | Dune Walkover | \$150/SF | 990 SF | \$148,500 | None |
| | Subtotal | | | \$505,417 | \$7,250 |
| Option B | | | | | |
| | Items 1-5 | | | \$505,417 | \$7,250 |
| 6 | Geotextile Tube | \$750/ft | 1,214 ft | \$910,500 | None |
| | Subtotal | | | \$1,415,917 | \$7,250 |
| Option C | | | | | |
| | Items 1-5 | | | \$505,417 | \$7,250 |
| 7 | Sand Filled Coir Envelope | \$350/ft | 1,214 ft | \$424,900 | \$200-\$1,000 |
| | Subtotal | | | \$930,317 | \$7,450-\$8,250 |

- **Final Cost Estimate of Sand Dune, *Option A*: \$506,000**
- **Final Cost Estimate of Geotextile Reinforced Dune, *Option B*: \$1,416,000**
- **Final Cost Estimate of Sand Filled Coir Envelope, *Option C*: \$930,000**
 - Expected annual cost of sand replenishment: \$7,250
 - Based on Field Monitoring of Coir and Jute Reinforced Dunes in Matunuck (pages 3&4)
